Test cases for “Blood Donation System”

- Provision of username and password is compulsory for **Login**
- Providing incorrect password during log in process will be resulted to error as (**Login Failed**)
- Both fields has to be filled for log in, if you provide only username then it will show error and you will not be allowed to get yourself logged in
- While registering yourself as a donor, you are bound to enter your all credentials, including your name. If system detects donor’s name filed is empty and containing no string then system will not **proceed**
- System will not allow you to save data if donor has not provided its contact. System will simply show error and will not proceed further
- This test case is for deletion. While deleting donor you have to provide its CNIC, otherwise donor’s details will not delete

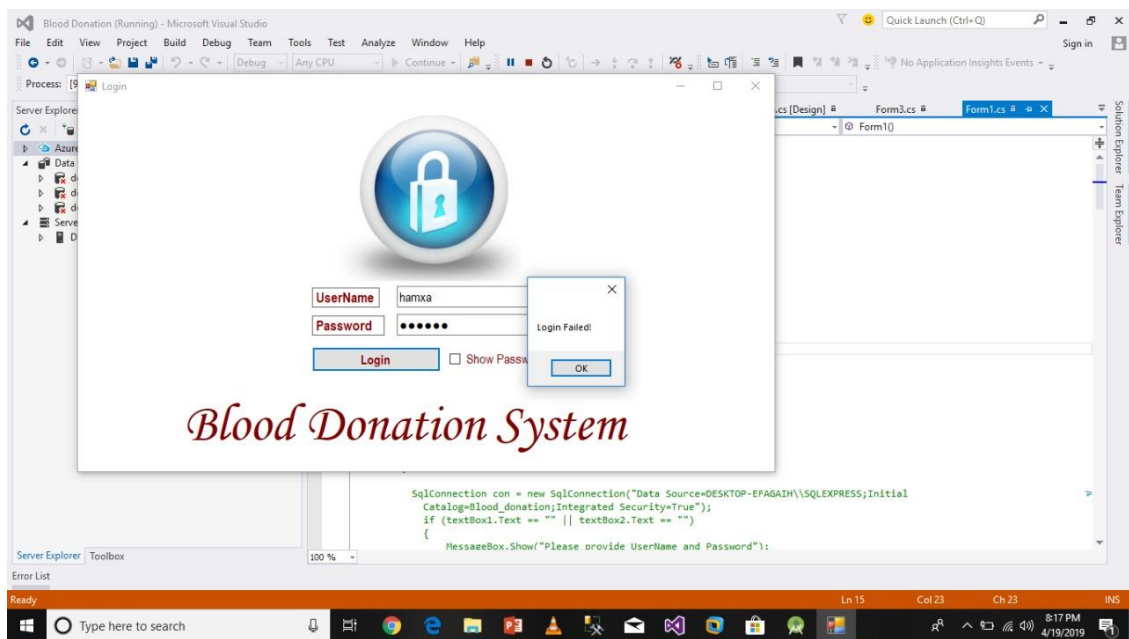

Test case: 1

Provision of username and password is compulsory for **Login**

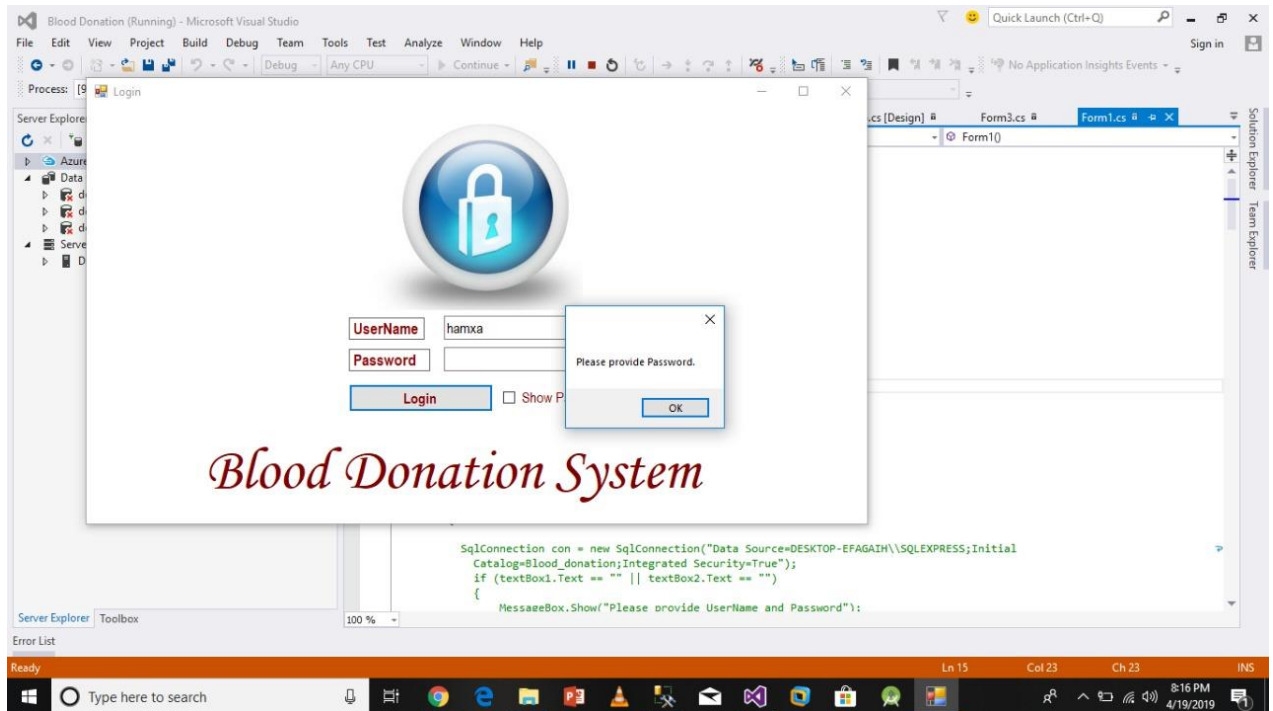

Test case: 2

Providing incorrect password during log in process will be resulted to error as (**Login Failed**)

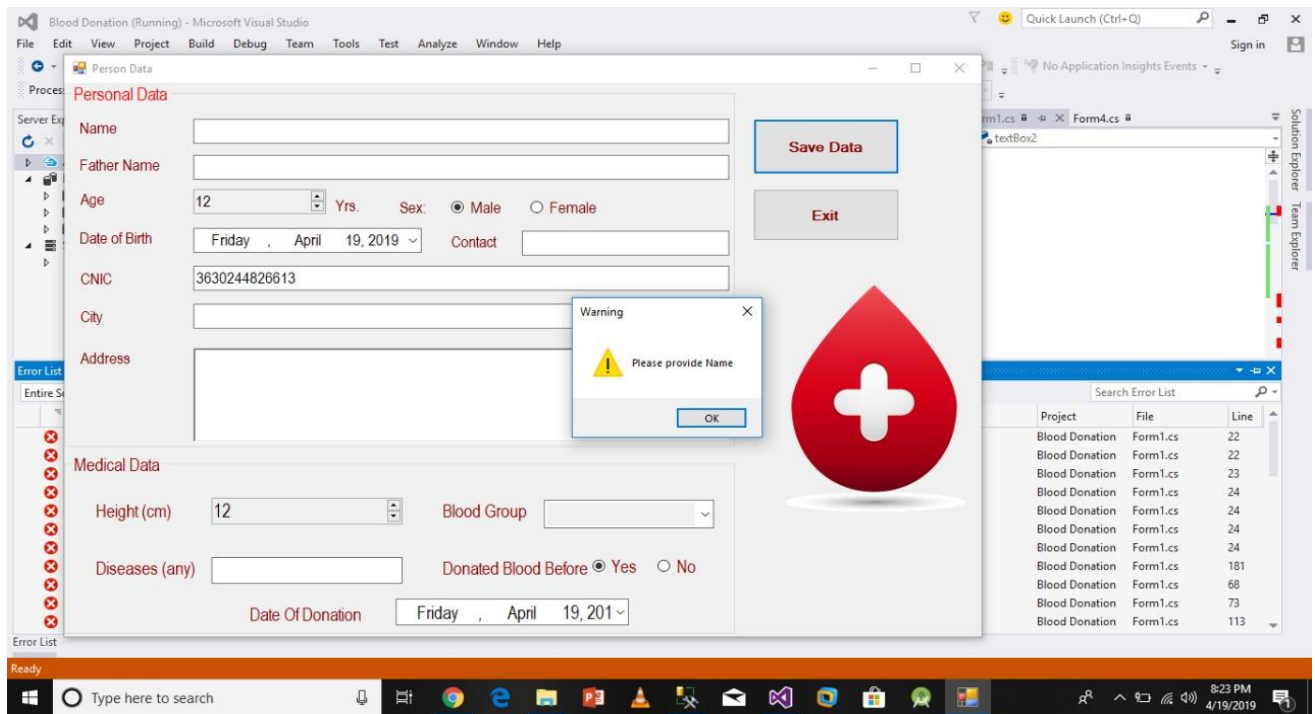

Test case: 3

Both fields has to be filled for log in, if you provide only username then it will show error and you will not be allowed to get yourself logged in

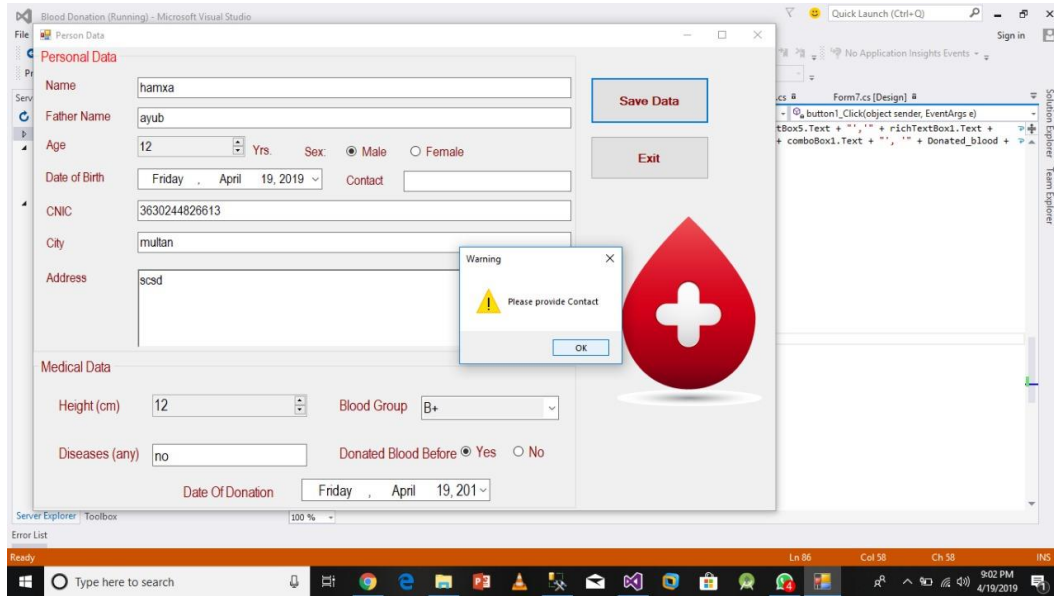

Test case: 4

While registering yourself as a donor, you are bound to enter your all credentials, including your name. If system detects donor's name filed is empty and containing no string then system will not **proceed**

Test case: 5

System will not allow you to save data if donor has not provided its contact. System will simply show error and will not proceed further

Test case: 6

This test case is for deletion. While deleting donor you have to provide its CNIC, otherwise donor's details will not delete
